Innovators in the Manufacture of Agricultural and Commercial Equipment

QUALITY - TESTED - PROVEN - DURABLE!
Maximize Yield and Reduce Cost

Maximize baleage yield with less effort and time than conventional wrapping methods.
Reduce wrap costs by wrapping only the diameter of the bale. The H&S LW1100 Linewrap efficiently wraps round bales from 4’ - 6’ diameter, and large square bales up to 6’6” lengthwise or 5’ long crosswise on riser.

- **Bale guides** center the bales for wrapping and are easily adjusted.
- The **open design** of the 7’ bale platform allows debris to fall through. The length of travel of the push bar is controlled with adjustable limit switches to reduce cycle time.
- The Linewrap’s two 30” pretensioners have a 65% stretch that allows for a tightly wrapped bale.
- The Linewrap’s independent power source is a Honda iGX390 gas engine with electric start. An 18 amp alternator powers the hydraulic system which controls all machine functions.
The Linewrap controls are conveniently located.

1. Automatic/manual operation
2. Manual hoop revolution
3. Bale pusher movement
4. Start/reset switch
5. Tailgate/brake lock
6. Hoop speed control for wrap

- Standard LED light kit is perfect for evening and night wrapping in cooler conditions.
- Emergency Stop Cable
- The tailgate has a transport bar to lock the tailgate.
- A hydraulic shutoff valve that must be closed for transport.
- The riser kit that allows square bales to be wrapped crosswise is standard equipment.
- A shutoff valve locks the brakes hydraulically against the tires. This prevents the wrapper from rolling ahead too easily when wrapping so proper pressure is kept between bales.
- The self-contained hydraulic system utilizes a large capacity oil reservoir for cooler operation.

located.

The Linewrap™ Bale Wrapper
LINEWRAP™ BALE WRAPPER

**AUTOMATIC OPERATING MODE**

Allows for **ONE** operator to load while the machine wraps. An **OPTIONAL** remote control is available for side loading and stopping the wrapping cycle.

When wrapping is finished, the bale-push is extended out manually to push the bales further down the bale ramp and complete the process.

The telescoping transport pole is pinned to the steering assembly when wrapping to keep the Linewrap in a straight line or to steer around obstacles.

**LINEWRAP™ OPTIONAL FEATURES**

An **optional** electric over hydraulic steering assembly is controlled by the loading operator with a remote control (B).

The **optional Riser Shelf** and 3rd Spear is needed to wrap up to 6½' long square bales lengthwise.

The control box (C) and remote control (B) can be ordered with your choice of either of the following options:
- Bale wrapping start and stop or
- Bale wrapping start/stop and steering of the Linewrap
Anchor points on bale arm endcaps for tying down bales.

Tricycle design front wheels for short turning radius.

Tele-Pole with spring loaded locking pin.

**BT814**

**EIGHT BALE CAPACITY**

With heavy-gauge steel and strong welds, the 2579 & 2958 bale processors shred round or square hay bales, corn stalk bales, and even baleage bales easily!

2 MODELS TO CHOOSE FROM!

• Built in PTO shaft & hydraulic hose storage bracket
• Fully adjustable clevis hitch
• Unibody frame construction with high clearance
• The optional deflector windrows product or feeds directly into bunks

Model 2957 - Left Discharge
Model 2958 - Right Discharge

Process high moisture hay and silage bales with ease!

NEW TIRE OPTION
16.5 x 16.1
10 PLY ALLIANCE
All Super Tires/Wheels

*Tires shown in photos are no longer available and have been replaced by 14L X 16.1 flotation tires.
**LEFT OR RIGHT DISCHARGE**

The Bale Processor’s **cradle system** constantly and evenly feeds the hammers. Unlike systems that must unroll the bale before shredding, the unique hydraulic cradle rocks bales over the hammers, so the entire cross-section of the bale can be shredded at once.
